

Standard 29-2009 -- Methods of Testing Automatic Ice Makers (ANSI/ASHRAE Approved)

This standard was first published in 1988 and reaffirmed in 1999 and 2005. The primary change in this version is to clarify the status of Annex A (formerly Appendix A). This previously informative appendix described several possible methods of calorimetry testing. In this revision it has been changed to a normative annex and modified to specify a single mandatory method of testing. This standard prescribes a method for testing automatic ice makers and includes information about testing procedures and the instrumentation and apparatus required for testing, a uniform method for calculating results, and more.

Keywords: testing ice makers, testing ice makers, ice maker testing, testing automatic ice makers
