

## **Standard 32.1-2004 -- Canned, and Other Sealed Beverages (ANSI Approved)**

This revised standard expands the scope of the 1997 version of the standard to include not only vending machines for bottled and canned beverages but also newer machines capable of vending beverages in other types of sealed containers. The Energy Consumption Test provisions in Section 7.2 have been expanded to include two tests instead of one: the first at 90°F (32.2°C) ambient temperature to replicate typical outdoor conditions, and the other at a 75°F (23.9°C) ambient temperature to replicate typical indoor conditions. Conditions for a voluntary third test with a 105°F (40.6°C) ambient temperature to replicate extreme outdoor conditions are described in Appendix B.

Units: Dual
