Congress main theme

Sustainable energy performance of buildings

CLIMAMED 2015 Congress topics

- Passive and active solutions for low and nearly Zero Energy Buildings
 - *Advanced HVAC systems for buildings*
 - *Passive solutions and integration of renewables.*
- Indoor Environmental Quality versus Energy Efficiency
 - *Comfort requirements, IAQ, ventilation:*
- Commissioning, Building management and maintenance, Energy Performance contract.
- Building energy retrofitting including historical buildings.
- Modeling, tools and simulation, BIM
- Financial and economic aspects of building construction and retrofitting
- Regulations and standards: effects and trends

Congress venue

Congress center of Antibes Juan-les-Pins (near Nice)

The organizer's committee of CLIMAMED 2015 is issuing the

“Call for papers”

For the Congress that will be held on the 10 - 11 September 2015 in Antibes Juan les Pins.

All authors who would like to participate are invited to present papers on one or more of the topics to be discussed at the Congress.

The authors must register and send their abstracts to the organizer's committee no later than the 16 January 2015.

Each abstract shall be evaluated by the local Scientific Committee and approved by the International Scientific Committee for full paper presentation.

For any further information please use:
contact@climamed15.eu
www.climamed15.eu

Language

The official language of the Congress is English. All the abstracts and accepted papers should be submitted in English. During plenary sessions, simultaneous translation English-French will be provided.

Important dates

Deadline for abstracts	16 January 2015
Notification of abstracts acceptance	13 February 2015
Full papers submission	15 April 2015
Notification of papers acceptance	15 June 2015
Deadline for papers in final format	15 July 2015
Congress	10 - 11 September 2015

Guidelines for submission abstracts

The abstracts must be submitted on website www.climamed15.eu with a maximum of 250 words. They should include: Headlines/Title/ name of the author(s) / Organization / Country / Address, phone Fax and e-mail address.

Language: English
Units preferably International System.

efficiency. The quality of the indoor environment, in addition to a health issue for its occupants is also a factor of productivity and performance.

In parallel with the new buildings with low energy consumption or nearly zero energy consumption, refurbishment of the existing stock is the major challenge of today and tomorrow. Besides the aspects of development of innovative technologies, experience feedback, improving the existing performance guarantee, maintenance and operation will be raised.

To discuss about all the issues and techniques that underlie, the Mediterranean engineer associations organize a biennial congress CLIMAMED.

To provide answers to these challenges, AICVF, the French Association of Engineers in Climate, Ventilation and Refrigeration organizes jointly with AIGARR Italy, APIRAC Portugal, ATECYR Spain and TTMD Turkey its 8th Mediterranean Congress CLIMAMED with the main scope:

SUSTAINABLE ENERGY PERFORMANCE OF BUILDINGS

In addition to the presence of international speakers we will organize a series of workshops, some of which specifically dedicated to specific aspects of the renovation of the existing financing and real estate. Education, training and the development of regulations will also be actively involved in these workshops.

Endorsed by ASHRAE, REHVA and IBPSA, CLIMAMED 2015 shall be a productive forum, where engineers, architects, designers and manufacturers alike can share information and expertise.

On behalf of the Organizing Committee, we invite you to join Antibes Juan-les Pins for the 2015 edition of CLIMAMED.

Bertrand MONTMOREAU
President of CLIMAMED 2015

Francis ALLARD
President of the International Scientific Committee

WELCOME!

It is our great pleasure to invite you to CLIMAMED 2015, the leading Mediterranean scientific and engineering congress in the field of Heating, Ventilation, Air-conditioning and Refrigeration that will take place at the Congress Center of Antibes Juan-les-Pins, French Riviera (Nice) France 10 - 11 September 2015.

Today, heating, ventilation and air conditioning are taking an important part of the total energy consumption of the buildings in our world. In order to tackle the steadily increase of energy consumption the use of renewable energy is a must. Harnessing renewable energy sources is crucial to limit the proliferation of greenhouse gas emissions. In parallel, to limit energy consumption buildings are better and better insulated and air tight. Nevertheless buildings are not meant to save energy but to bring comfort, health and safety to the occupants whatever their destination. Experts consider that indoor environment quality is at least as important as energy
